

Can't chew on this.

CONDUMAX REPEL

Pioneering technology that makes **cable repellent** against:
Rodents – Termites – Insects

Electrical installations, exposed or underground, suffer attacks of rodents and insects. This problem can damage the cables, increasing the risk of short circuits and generating millions in losses.

With Condumax Repel, you increase the durability of your installation, without damaging the environment.

The Repel component is non-toxic to animals and does not alter the physical, mechanical and electrical properties of the cables.

The Repel solution is available across the entire Condumax Cable line.

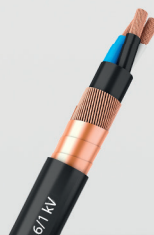

Aluminum or copper conductors, flexible or not, single, unipolar and multipolar, cross-sections from 0,5 up to 500mm² insulated/sheathed in PVC, HEPR, XLPE, XLPO, LSZH and others.
