## Maxlink Al Flex Cable 0,6/1kV

90 °C

### Conductor

Aluminum wires, special alloy, flexible stranding.

### Insulation

XLPE 90 °C - Polyethylene thermoset compound.

### Sheath

Polyvinil Chloride thermoplastic compound, flame resistant.

UV PROTECTION AND REPEL\* TECHNOLOGY AVAILABLE, ON REQUEST.

### Marking

CONDUMAX MAXLINK AL FLEX 1 x (cross-section) mm<sup>2</sup> 0,6/1 kV AL/ XLPE/ST2 90 °C (manufacturing year).

### Maximum operation temperatures

- 90 °C - continuous service.
- 130 °C - overload.
- 250 °C - short-circuit.

### Application

The flexible aluminum conductor is used in fixed industrial power installations, also can be used in photovoltaic and low voltage underground lines, as well. Some advantages are space optimization and easiest installation, increasing productivity by reducing resources as time and people.

### Applicable standards

NBR 7287 – Power cables with solid extruded cross-linked polyethylene (XLPE) insulation for insulation voltages from 1 kV to 35 kV.

NBR NM 280 – Insulated cable conductors.

NBR 6244 – Flame resistance test for electrical wires and cables - test method.
